Add mixed fractions - different denominators

Answer in the simplest terms

Answer sheet

$1\frac{1}{3} + 2\frac{2}{5} = 3\frac{5+6}{15} = 3\frac{11}{15}$

$2\frac{2}{5} + 1\frac{1}{2} = 3\frac{4+5}{10} = 3\frac{9}{10}$

$2\frac{3}{4} + 1\frac{1}{6} = 3\frac{9+2}{12} = 3\frac{11}{12}$

$3\frac{5}{7} + 2\frac{2}{3} = 5\frac{15+14}{21} = 5\frac{29}{21} = 6\frac{8}{21}$

$5\frac{2}{9} + 2\frac{1}{4} = 7\frac{8+9}{36} = 7\frac{17}{36}$

$4\frac{5}{6} + 3\frac{3}{5} = 7\frac{25+18}{30} = 7\frac{43}{30} = 8\frac{13}{30}$

$2\frac{1}{3} + 5\frac{3}{8} = 7\frac{8+9}{24} = 7\frac{17}{24}$

$3\frac{1}{2} + 6\frac{2}{9} = 9\frac{9+4}{18} = 9\frac{13}{18}$

$2\frac{3}{10} + 4\frac{3}{4} = 6\frac{6+15}{20} = 6\frac{21}{20} = 7\frac{1}{20}$
